

A wide-angle photograph of a snowy landscape at night. In the foreground, there's a snow-covered slope with some trees and a small wooden cabin. The background is a dark, starry sky with a vibrant green aurora borealis (Northern Lights) streaking across it. The aurora is the most prominent feature, appearing as a bright, glowing band of light.

“We witnessed an explosion of lights so spectacular that our oohs and gasps set the sled dogs howling.”

— AN AURORA VISITOR

The Northern Lights are like fireworks on a cosmic scale and the best place to see the show is Canada's Northwest Territories. As you look up at this living canvas of colour, you understand why people come from around the world to see one of the planet's greatest natural wonders.
